DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1 – 32 (each in part), and 36 drawn to methods of assaying neurotransmitter levels, classified in class 435, subclass 4, for example.
 - II. Claims 1 – 32 (each in part), 33 – 35, 37 – 53 drawn to methods of assaying neurotransmitter levels and administering amino acid precursors, classified in class 436, subclass 89, for example.
2. The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different designs, modes of operation, and effects (MPEP § 802.01 and § 806.06). In the instant case, the different inventions require different steps and starting materials. Invention II requires administering amino acid precursors to patients; neither amino acid precursors nor administration of agents to patients are required for Group I, which is drawn only to assays. Search for the two groups are not coextensive, as Group II requires search and consideration of elements not required for Group I. Thus consideration of both groups together would be burdensome.

Because these inventions are independent or distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter and because the searches are not coextensive, restriction for examination purposes as indicated is proper.

Requirements for Elections of Species

3. This application contains claims directed to the following patentably distinct species:

SPECIFIC NEUROTRANSMITTERS

 - a) serotonin
 - b) catecholamine
 - c) epinephrine
 - d) norepinephrine
 - e) dopamine

SPECIFIC DYSFUNCTIONS

- f) obesity
- g) panic disorder
- h) obsessive compulsive disorder
- i) Parkinson's disease

The species are independent or distinct because: the specific neurotransmitters are structurally distinct molecules and cannot be substituted one for the other in either assays for detection or in methods of treatment. The specific dysfunctions comprise different non-overlapping patient populations and search and consideration of any one would not be informative as to the novelty or non-obviousness of any other.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, claims 1 – 9, 13 – 16, 19, 24 – 27, 33 – 35, 37 – 43, 51 – 53 are generic with respect to neurotransmitter and claims 1 – 3, 5 – 26, 29, 31 – 37, 40 – 44, 47, 49 – 52 are generic with respect to dysfunction.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which depend from or otherwise require all the limitations of an allowable generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).
